CHLORPHENIRAMINE / PHENYLEPHRINE / METHSCOPOLAMINE CAPSULES

What This Medication Is For

This medication is used to help relieve allergy and sinus symptoms, including congestion, runny nose, and excessive mucus.

It contains three active ingredients that work together to reduce allergy symptoms and sinus secretions.

How This Medication Works

Chlorpheniramine – An antihistamine that helps reduce allergic reactions such as sneezing, itching, and runny nose.
Phenylephrine – A decongestant that helps relieve nasal and sinus congestion.
Methscopolamine – An anticholinergic medication that helps dry excess sinus and nasal secretions.

While the first two ingredients are available in some over-the-counter products, methscopolamine provides additional drying effects, which may improve symptom control.

The capsules are prepared in a slow-release formulation, allowing the medication to work over a longer period while helping reduce the intensity of side effects.

Possible Side Effects

Some patients may experience:

- Drowsiness
- Dry mouth
- Blurred vision
- Nervousness or mild anxiety

These effects are usually mild due to the slow-release formulation.

Safety Information

Chlorpheniramine and methscopolamine may cause drowsiness. Use caution when driving or operating machinery until you know how this medication affects you.

Seek medical attention immediately if you experience signs of an allergic reaction such as rash, hives, swelling of the face, mouth, or throat.

Storage

- Store at room temperature
- Keep in a cool, dry place
- Discard by expiration date on label

This medication was compounded specifically for you by our pharmacy based on a prescription from your healthcare provider to meet your individual treatment needs. If you have not already done so, please speak with your pharmacist or prescriber to ensure you understand why this medication was prescribed, how to properly take it, and whether it may interact with other medications you are taking. Compounding allows healthcare providers to customize medications when commercially available products may not meet a patient's specific needs. Contact your pharmacist or prescriber if you experience side effects, begin taking additional medications, or have allergies, questions, or concerns about this medication.
