

TOPICAL HAIR GROWTH SPRAY

APPLICATION INSTRUCTIONS

What This Medication Is For

This topical hair growth spray is used to help treat hair thinning and hair loss. The medication works by supporting healthy hair follicles and improving scalp conditions that promote hair regrowth. With consistent use, it may help stimulate new hair growth, slow further hair loss, and improve overall hair density in affected areas.

How to Take This Medication

Apply the spray to the affected areas of the scalp as directed by your healthcare provider, typically once or twice daily. Use only the recommended amount. Consistent use is important for best results. If a dose is missed, apply the medication at the next scheduled time.

Start with a Dry Scalp

Ensure your hair and scalp are completely dry before applying the spray. If your hair was recently washed, gently towel dry to remove excess moisture.

Apply to the Scalp

Part your hair in thinning areas to expose the scalp. Spray the solution directly onto the scalp, focusing on affected areas. Avoid spraying onto the hair itself.

Massage Gently

Use your fingertips to gently massage the solution into the scalp. This helps ensure even distribution and absorption.

Allow Time to Dry

Allow the solution to fully dry before styling your hair or going to bed. Avoid using hair dryers or styling tools during this time.

Wash Your Hands

After application, wash your hands thoroughly to remove any remaining solution.

This topical spray was compounded specifically for you by our pharmacy based on a prescription from your healthcare provider to meet your individual treatment needs. If you have not already done so, please speak with your pharmacist or prescriber to ensure you understand why this medication was prescribed, how to properly apply the spray, and whether it may interact with other medications you are taking. Compounding allows healthcare providers to customize medications when commercially available products may not meet a patient's specific needs. Contact your pharmacist or prescriber if you experience side effects, begin taking additional medications, or have allergies, questions, or concerns about this medication.
